Summary

Computer Science graduate (CGPA 9.42/10) with hands-on experience building full-stack web applications and AI-powered systems using React, FastAPI, Django and Node.js. Patent holder with a track record of shipping end-to-end projects, from REST APIs and databases to responsive user interfaces.

Education

SR University Hanamkonda, Telangana

Bachelor of Technology in Computer Science Engineering (CGPA: 9.42 / 10.00) *October 2022 – May 2026*

Projects

SenseEd – Multi-Modal Emotion Detection | *Python, FastAPI, React* | GitHub January 2026

- Developed an AI-powered system for real-time emotion detection using facial expressions, voice tone and user interaction data.
- Built a FastAPI backend integrating OpenCV, MediaPipe, DeepFace and Librosa, exposing a unified emotion prediction REST API.
- Designed a React dashboard with an adaptive AI assistant offering personalized learning support, quizzes and motivation.
- Implemented emotion analytics, logging and customizable modality weighting to improve prediction accuracy and user engagement.

MealMate – Food Subscription Web App | *React, Express.js, Node.js, MongoDB* | GitHub March 2025

- Built a full-stack food subscription platform with a React frontend and an Express.js + MongoDB backend, supporting personalized meal browsing and order placement for 1,000+ monthly active users.
- Created a responsive React UI that reduced average meal selection time by 30% through improved layout and navigation.
- Implemented category filters (Veg, Non-Veg, Vegan, Drinks) and subcategories (Indian, Chinese, Gym-friendly), improving discoverability by 60%.
- Integrated AdminJS to manage CRUD operations on 50+ food items and 500+ users, removing reliance on third-party admin tools.

Movie Review System | *Django, PostgreSQL, HTML, CSS, Bootstrap, JavaScript* | GitHub November 2024

- Developed a full-stack movie review platform with Django and PostgreSQL where users browse 500+ movies, submit reviews, rate films and view aggregated ratings.
- Implemented secure user authentication with separate signup and login flows and personalized content for registered users.
- Built an interactive JavaScript star-rating component that updates average ratings dynamically.
- Designed the Django models and PostgreSQL schema for users, movies, reviews and ratings, ensuring data consistency, security and efficient storage.

Technical Skills

Programming Languages: Java, Python, JavaScript

Web Technologies: HTML, CSS, Bootstrap, Node.js, REST APIs

Frameworks & Libraries: React.js, Express.js, Django, FastAPI

AI/ML: OpenCV, MediaPipe, DeepFace, Librosa, NumPy, Pandas

Databases: MySQL, PostgreSQL, MongoDB, SQL

Tools: Git, GitHub, VS Code, Jupyter Notebook, Postman, Claude (AI-assisted development)

Achievements

- Engineered a solar-powered UV-C water bottle prototype providing chemical-free sterilization with 99.9% efficiency for sustainable, portable water purification. **Patent No. 202541014292 A (07/03/2025).**

Co-Curricular Activities

Computer Society of India (CSI) | *Member* August 2023 – December 2024

- Attended 5+ hands-on workshops and technical seminars on software development, cybersecurity and cloud computing.
- Completed 10+ CSI coding challenges and contributed to team-based coding projects.
